

**GRADE:3****Subject: SST****Chapter-14 Our Earth- A Unique Planet****Q.I) New words:**

- 1) Unique
- 2) Distance
- 3) Atmosphere
- 4) Support
- 5) Surrounded
- 6) Layer
- 7) Breathe
- 8) Mixture
- 9) Nitrogen
- 10) Oxygen
- 11) Carbon dioxide
- 12) Harmful
- 13) Blue planet
- 14) Surface
- 15) Vapour

**Q.II) Answer the following questions.****Q.1) What makes the Earth unique?**

Ans: Earth is the only planet that supports life and this makes it unique.

**Q.2) How does distance from the Sun affect life on Earth?**

Ans: The Earth is placed at the right distance away from the Sun. This keeps the temperature on the Earth moderate i.e. neither too hot nor too cold and this in turn supports life on the earth.

**Q.3) What is the atmosphere made up of?**

Ans: The atmosphere is the mixture of gases like nitrogen, oxygen and carbon dioxide.

**Q.4) How is water important for life on Earth?**

Ans: Water is important for life on Earth as all living beings need water to survive.

**Q.5) What would happen if the Earth moved closer to the Sun?**

Ans: If the Earth moves closer to the Sun, the temperature of the earth will rise to an extent that life would not be possible on it.
