Word Problems on Subtraction

Example 1: The age of Angel's brother is 35 years and she is 12 years younger than him. Find the age of Angel.

Solution:

It is given that Angel is 12 years younger than her brother.
Her brother is 35 years old.

Subtract the ones first
and then the tens.

$$\begin{array}{r} \text{T O} \\ 35 \\ - 12 \\ \hline 23 \end{array}$$

Angel's age = $35 - 12 = 23$ years.

Therefore, Angel's age is 23 years.

What is
Angel's age?
