3) Answer in brief

i) What is contour interval?

= The vertical distance between two successive contours is 20 m, known as contour interval.

ii) What is hachuring?

= Hachures are short lines representing the direction of slopes.

* For steep slope it is drawn as closer together than the gentle slope.

* The disadvantage of hachuring is alone that it gives no indication about actual height.

iii) What is the indication of $\Delta 325$?

= This is the indication of Triangulated height.

iv) Mention the types of settlements explain any one settlement.

= There are three types of settlements:-

1) Linear

2) Nucleated

3) Dispersed
