

# React Assignments

**Deadline : (dec-28-2023 to jan-5-2024)**

## Day 48-55

1. Create React JS Basic Form Master is built with ReactJS and demonstrates how to create a basic form in a React application. The project includes a basic HTML form that allows the user to enter their name, email address, and a message.

Refer From- <https://github.com/Cleanodedotclub/Basic-Form-Master>

2. Create React Emoji Search Github which contains a React-based web application that allows users to search for emojis and copy them to their clipboard.

Refer From- <https://github.com/Cleanodedotclub/Emoji-Search-Master>

3. Create React JS Expense Tracker Master which contains the source code for a simple expense tracking application built using React.js. The application allows users to enter their daily expenses and income, categorize them, and track their spending over time.

Refer From- <https://github.com/Cleanodedotclub/Expense-Tracker-Master>

4. Create React JS Meme App Master that allows users to search for and create memes using an external API. The app uses React JS components to display a search bar and meme results, and also allows users to upload their own images to create new memes.

Refer From- <https://github.com/Cleanodedotclub/Meme-App-Master>

5. Create React JS Entertainment Hub" The purpose of the application is to provide users with a platform where they can browse and discover different types of entertainment content, such as movies, TV shows, and music.

Refer From- <https://github.com/Cleancodedotclub/Entertainment-Hub-Master>

6. Create React JS Password Generator a web application that allows users to generate random passwords based on specific requirements such as length, the inclusion of special characters, uppercase and lowercase letters, and numbers.

Refer From- <https://github.com/Cleancodedotclub/Reset-Password-Generator>

7. Create Snapshot Master that contains a single-page web application built using ReactJS. The application allows users to search for images based on a search term and displays a gallery of images that match the search query. The images are sourced from the Unsplash API, which is integrated with the application

Refer From- <https://github.com/Cleancodedotclub/SnapShot-Master>

8. Create React JS YouTube Clone Frontend Master that provides a basic implementation of the YouTube video player using React.js. This repository contains the frontend codebase of a YouTube clone application that is designed to display video content from YouTube.

Refer From- <https://github.com/Cleancodedotclub/Youtube-Clone-Frontend>

9. Create React JS Blog Website Master that contains code for a blog website built using React JS. The website has several features including the ability to add, edit and delete blog posts, search for posts by keywords, filter posts by tags, and view blog posts in a paginated format.

Refer From- <https://github.com/Cleancodedotclub/Blog-Website-Master>

10. Creating react login and signup page using local storage.
